

AMENDMENTS TO THE CLAIMS:

Kindly amend claim 1, and add new claims 9-15, as shown below.

This listing of claims will replace all prior versions and listings of claims in the

Application:

Claim 1 (currently amended): A plasma display module, said display comprising:

a plasma display module;

an interface board; and

an external power circuit,

wherein source voltages of said interface board are supplied from said external power

circuit, and

wherein said plasma display module further comprises:

a plasma display panel;

driving circuits which drive said plasma display panel; and

a power circuit into which an external alternating current is inputted ~~from outward~~, said power circuit supplying driving voltages to said driving circuits, and outputting an external source voltage to be used by ~~[[an]]~~ said external power circuit and a control voltage for controlling operations of ~~[[an]]~~ said interface board ~~to which source voltages of said interface board are supplied from said external power circuit, and~~, operations of said power circuit being controlled with control signals output by said interface board.

Claim 2 (original): A plasma display module according to claim 1, wherein said control signals output by said interface board contain first and second control signals, and said power circuit outputs said control voltage to said interface board when said external alternating current

is inputted to said power circuit, outputs said external power voltage to said external power circuit when said first control signal is inputted to said power circuit, and outputs said driving voltages to said driving circuits when said second control signal is inputted to said power circuit.

Claim 3 (original): A plasma display module according to claim 1, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages.

Claim 4 (original): A plasma display module according to claim 1, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit shuts down a highest-value voltage of said plurality of voltages earlier than a lowest-value voltage of said plurality of voltages.

Claim 5 (original): A plasma display module according to claim 1, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages and shuts down said highest-value voltage earlier than said lowest-value voltage.

Claim 6 (original): A plasma display module according to claim 2, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages.

Claim 7 (original): A plasma display module according to claim 2, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit

shuts down a highest-value voltage of said plurality of voltages earlier than a lowest-value voltage of said plurality of voltages.

Claim 8 (original): A plasma display module according to claim 2, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages and shuts down said highest-value voltage earlier than said lowest-value voltage.

Claim 9 (new): A plasma display module comprises:

a plasma display panel;

driving circuits which drive said plasma display panel; and

a power circuit into which an external alternating current is inputted from outward, said power circuit supplying driving voltages to said driving circuits, and outputting an external source voltage to be used by an external power circuit and a control voltage for controlling operations of an interface board to which source voltages of said interface board are supplied from said external power circuit, and operations of said power circuit being controlled with control signals output by said interface board, wherein said control signals output by said interface board contain first and second control signals, and said power circuit outputs said control voltage to said interface board when said external alternating current is inputted to said power circuit, outputs said external power voltage to said external power circuit when said first control signal is inputted to said power circuit, and outputs said driving voltages to said driving circuits when said second control signal is inputted to said power circuit.

Claim 10 (new): A plasma display module according to claim 9, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages.

Claim 11 (new): A plasma display module according to claim 9, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit shuts down a highest-value voltage of said plurality of voltages earlier than a lowest-value voltage of said plurality of voltages.

Claim 12 (new): A plasma display module according to claim 9, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages and shuts down said highest-value voltage earlier than said lowest-value voltage.

Claim 13 (new): A plasma display module according to claim 9, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit starts up a lowest-value voltage of said plurality of voltages earlier than a highest-value voltage of said plurality of voltages.

Claim 14 (new): A plasma display module according to claim 9, wherein said driving voltages contain a plurality of voltages having different values, and said power circuit shuts down a highest-value voltage of said plurality of voltages earlier than a lowest-value voltage of said plurality of voltages.
